Group 5 — Individual Contribution Statements

Course: Data Mining and Data Wrangling **Project:** Jiji Uganda Product Listings Analysis

Wandwasi Kevin Joel

Kevin Joel led the **data collection and technical implementation**. He inspected the Jiji Uganda site structure and robots.txt rules, implemented the scraper in Python with retry logic, and monitored request budgets to ensure ethical compliance. He also designed the SQLite schema and integrated raw data into the cleaning pipeline. His technical leadership ensured efficient, reproducible, and responsible data collection.

Ndambire Harry Bosco

Harry Bosco focused on **data cleaning and preprocessing**. He standardized column names, converted prices to numeric values, handled missing data, and removed duplicates using pandas. He documented cleaning decisions in the notebook and prepared statistical summaries. His careful work ensured the dataset was reliable and ready for analysis.

Agaba Jonathan

Jonathan contributed to **exploratory data analysis and visualization**. He created histograms, box plots, scatter plots, and line charts using Matplotlib and Seaborn. He analyzed price distributions, compared product conditions, and examined changes over time. He also led the additional group question on condition vs. price. His clear visualizations made results accessible and compelling.

Musiime Miracle

Miracle focused on **documentation and reporting**. She drafted the README, coordinated the final report, and prepared presentation slides. She ensured project objectives, ethical safeguards, and limitations were clearly communicated. She also verified dataset consistency and collection logs. Her contributions strengthened transparency and communication.

Nakitto Favour

Favour contributed to **data collection oversight and interpretation**. She monitored daily scraping runs, recorded collection counts, and preserved raw data files. She assisted in interpreting EDA results, especially price variation and brand comparisons, and documented limitations such as missing posting dates and duplicates. Her role ensured findings were contextualized and responsibly reported.
